

Maternal Health Conditions and Child Oral Health

Public and Patient Advisory Panel

We want to involve mothers affected by two or more long term health conditions (any physical or mental health condition) as research advisors to make sure that the project is relevant to them. This role will involve reviewing documents and/or attending meetings that might be online or in person to give us feedback on our plans and work. You will be paid for your time and reimbursed for any expenses. You do not have to commit to take part in all parts of the project.

Research Summary

<p>How is maternal health related to children’s dental health (teeth)?</p>	<p>We will be using the health data available in Scotland to analyse whether there is a link between health conditions affecting mums and their children’s teeth. We will be looking at which combinations of conditions this might be. We would need your feedback on the conditions we look at and in reviewing our findings.</p>
<p>What are the challenges for mums with long term health conditions with their children’s teeth?</p>	<p>If we find that there is a link between mum’s having long term health conditions we will try to understand why this is. We will hold interviews to ask mums about this and would like your feedback on the questions that we ask in these interviews. We would also like your help in how we share our findings effectively with others involved in research, healthcare providers and the public</p>
